NOTIFICATION OF NON-COMPLIANCE APPEAL BRIEF

Non-Appealable Subject Matter

Appellant's brief presents arguments relating to objections to the drawings. This issue relates to petitionable subject matter under 37 CFR 1.181 and not to appealable subject matter. See MPEP § 1002 and § 1201.

Defect in the Summary of the Claimed Subject Matter

The brief does not contain a concise explanation of the subject matter defined in each of the independent claims involved in the appeal, referring to the specification by page and line number, and to the drawing, if any, by reference characters; and/or does not identify the structure, material, or acts described in the specification as corresponding to each claimed function for every means plus function and step plus function for each independent claim involved in the appeal and for each dependent claim argued separately by reference to the specification by page and line number, and to the drawing, if any, by reference characters, as required by 37 CFR 41.37(c)(1)(v).

The examiner notes that the summary provided is more of description of the general principles of operation and/or purported benefits of the disclosed invention than an actual summary of the invention as claimed. Where applicable, it is preferable to read the appealed claims on the specification and the drawings. The required reference to page and line number of the specification and reference characters in the drawing should be more specific and relate to each element recited in the claims. While reference to page and line number of the specification may require somewhat more detail than simply summarizing the invention, it is considered important to enable the Board to more quickly determine where the claimed subject matter is

described. The examiner further notes that, in this case, it is particularly important to point out where in the original specification and drawing certain recited elements may be found because the examiner has considered that they were not part of the original disclosure.
